1 Introduction

1.1 Purpose of this document

The purpose of a **Requirement Analysis and Specifications Document** is the process of discovering the purpose for which a software system was intended, by identifying stakeholders and their needs, and documenting these in a form that is amenable to analysis, communication, and subsequent implementation. It is also concerned with the relationship of software's factors such as goals, functions and constrains to precise specifications of software behavior, and to their evolution over time and across software families.

Citation

1.2 Actual system

The system we are to develop is brand new, there is no previous system.
